

Cursor + Hub

Laptop once · each new project one paste

Same repo and shared Cursor Pro are fine. Token lives on your laptop only (%USERPROFILE%\appdoers\hub.env). Never swap env files between laptops.

A. New laptop (once per person)

1. Hub 'My Account' 'Cursor setup' 'Generate token'

2. Run once from Appdoers Work folder:

```
powershell -ExecutionPolicy Bypass -File "Appdoers CRM\hub-cursor-kit\setup-my-cursor-token.ps1"
```

Paste token when asked. Never edit again on this laptop.

B. Each new project (one paste, zero prompts)

Open PowerShell in the project folder and run:

```
powershell -ExecutionPolicy Bypass -Command "irm https://raw.githubusercontent.com/AppdoersDevTeam/Appdoers-Hub/master/hub-cursor-kit/install-project.ps1 -OutFile $env:TEMP\hub-install.ps1; & $env:TEMP\hub-install.ps1"
```

Installs tools + Cursor rules. Uses your laptop token automatically.

C. Use Cursor

Open the project folder in Cursor 'new Agent chat' 'pick client and project. Tickets and time logging are automatic.
