

Cursor + Hub

One-time setup on your laptop (5 minutes)

Everyone uses the same repo and can share one Cursor Pro login. Each person runs this once on their own laptop. Your token saves to your computer only — never edit it again.

1. Get your token in Hub

Sign in to Appdoers Hub 'My Account (sidebar) 'Cursor setup 'enter a name 'Generate Cursor token 'Copy token or .env block.

2. Run the setup script once

Open PowerShell in your Appdoers Work folder and run:

```
powershell -ExecutionPolicy Bypass -File "Appdoers CRM\hub-cursor-kit\setup-my-cursor-token.ps1"
```

Paste your token when asked. It saves to %USERPROFILE%\appdoers\hub.env on your laptop.

3. Test

```
cd "Appdoers CRM"  
node tools/hub-workflow-cli.mjs whoami
```

You should see your name.

4. Use Cursor

Open the project folder you are working on (e.g. AppdoersWebsite) in Cursor. Start a new Agent chat — it will ask for client, project, and confirm your name. Tickets and time logging happen automatically.
